NOTIFICATION OF TRANSMITTAL OF THE INTERNATIONAL PRELIMINARY EXAMINATION REPORT

(PCT Rule 71.1)

Date of mailing (day/month/year)	10.03.2004
-------------------------------------	------------

Applicant's or agent's file reference SW/P016382WO	IMPORTANT NOTIFICATION
--	-------------------------------

International application No. PCT/GB 03/00897	International filing date (day/month/year) 03.03.2003	Priority date (day/month/year) 01.03.2002
---	---	---

Applicant BEAUMONT, Terry

1. The applicant is hereby notified that this International Preliminary Examining Authority transmits herewith the international preliminary examination report and its annexes, if any, established on the international application.
2. A copy of the report and its annexes, if any, is being transmitted to the International Bureau for communication to all the elected Offices.
3. Where required by any of the elected Offices, the International Bureau will prepare an English translation of the report (but not of any annexes) and will transmit such translation to those Offices.
4. **REMINDER**

The applicant must enter the national phase before each elected Office by performing certain acts (filing translations and paying national fees) within 30 months from the priority date (or later in some Offices) (Article 39(1)) (see also the reminder sent by the International Bureau with Form PCT/I/B/301).

Where a translation of the international application must be furnished to an elected Office, that translation must contain a translation of any annexes to the international preliminary examination report. It is the applicant's responsibility to prepare and furnish such translation directly to each elected Office concerned.

For further details on the applicable time limits and requirements of the elected Offices, see Volume II of the PCT Applicant's Guide.

The applicant's attention is drawn to Article 33(5), which provides that the criteria of novelty, inventive step and industrial applicability described in Article 33(2) to (4) merely serve the purposes of international preliminary examination and that "any Contracting State may apply additional or different criteria for the purposes of deciding whether, in that State, the claimed invention is patentable or not" (see also Article 27(5)). Such additional criteria may relate, for example, to exemptions from patentability, requirements for enabling disclosure, clarity and support for the claims.

**INTERNATIONAL PRELIMINARY
EXAMINATION REPORT**

International application No. PCT/GB 03/00897

I. Basis of the report

1. With regard to the **elements** of the international application (*Replacement sheets which have been furnished to the receiving Office in response to an invitation under Article 14 are referred to in this report as "originally filed" and are not annexed to this report since they do not contain amendments (Rules 70.16 and 70.17)*):

Description, Pages

1-7 as originally filed

Claims, Numbers

1-15 as originally filed

Drawings, Sheets

1/4-4/4 as originally filed

2. With regard to the **language**, all the elements marked above were available or furnished to this Authority in the language in which the international application was filed, unless otherwise indicated under this item.

These elements were available or furnished to this Authority in the following language: , which is:

- the language of a translation furnished for the purposes of the international search (under Rule 23.1(b)).
- the language of publication of the international application (under Rule 48.3(b)).
- the language of a translation furnished for the purposes of international preliminary examination (under Rule 55.2 and/or 55.3).

3. With regard to any **nucleotide and/or amino acid sequence** disclosed in the international application, the international preliminary examination was carried out on the basis of the sequence listing:

- contained in the international application in written form.
- filed together with the international application in computer readable form.
- furnished subsequently to this Authority in written form.
- furnished subsequently to this Authority in computer readable form.
- The statement that the subsequently furnished written sequence listing does not go beyond the disclosure in the international application as filed has been furnished.
- The statement that the information recorded in computer readable form is identical to the written sequence listing has been furnished.

4. The amendments have resulted in the cancellation of:

- the description, pages:
- the claims, Nos.:
- the drawings, sheets:

**INTERNATIONAL PRELIMINARY
EXAMINATION REPORT**

International application No.

PCT/GB 03/00897

5. This report has been established as if (some of) the amendments had not been made, since they have been considered to go beyond the disclosure as filed (Rule 70.2(c)).

(Any replacement sheet containing such amendments must be referred to under item 1 and annexed to this report.)

6. Additional observations, if necessary:

V. Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement

1. Statement

Novelty (N)	Yes: Claims	
	No: Claims	1,3-6
Inventive step (IS)	Yes: Claims	
	No: Claims	2,7-15
Industrial-applicability (IA)	Yes: Claims	-1-15-----
	No: Claims	

2. Citations and explanations

see separate sheet

EXAMINATION REPORT - SEPARATE SHEET**

International application No. PCT/GB03/00897

Re Item V

Reasoned statement under Rule 66.2(a)(ii) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement

1. Reference is made to the following documents:

D1: US 5673692 A1

D2: US 5971931 A1

D3: DE 3723275 A1

2. The subject-matter of claims 1, 3-6 is not novel (Article 33(2) PCT).

The document D1 discloses (the references in parentheses applying to this document):

A sensing device comprising:

a) physiological sensing means (col. 1, lines 42-54); and
b) locating means to locate the sensing means inside an ear canal (col. 7, lines 7-12) whereby the locating means is provided with an aperture which, when the sensing device is fitted in the ear canal, allows motion of the air in and out of the ear canal (col. 7, lines 29-36).

Furthermore, the locating means, thus the housing (ref. sign 76), is made of a pliable material; The features of claims 3-5 are not new over the disclosure of document D1 (col. 6, line 65-col. 7, line 6 and col. 7, lines 13-18).

Also, document D1 discloses a sensing device comprising pulse oximetry optical transmitters and receiver (col. 4, lines 3-8 and col. 7, line 61-col. 8, line 19).

Consequently, the subject-matter of claims 1, 3-6 is not novel (Article 33(2) PCT).

3. The subject-matter of claims 2, 7-15 cannot be considered as involving an inventive

**INTERNATIONAL PRELIMINARY
EXAMINATION REPORT - SEPARATE SHEET**

International application No. PCT/GB03/00897

step (Article 33(3) PCT).

3.1 The sensing device disclosed in document D1 is O-shaped (D1, figures 6-10). In claim 2 a slight constructional change in the shape of the locating means of claim 1 is suggested which comes within the scope of the customary practice followed by persons skilled in the art, especially as the advantages thus achieved can be readily contemplated in advance. Consequently, the subject-matter of claim 2 appears to lack an inventive step (Article 33(3) PCT).

3.2 Document D1 discloses a sensor at the tip of the locating means for measuring the temperature (D1, figure 10, ref. sign 122; col. 8, lines 37-49). Using a heat transfer tip contacted with a temperature sensor, as suggested in claims 7 and 8, in order to achieve the same result lies within the scope of the customary practice followed by persons skilled in the art and cannot be considered as involving an inventive step (Article 33(3) PCT).

3.3 The use of ear muffs, ear molds, ear clips or headbands in order to secure a sensing device to the ear are well-known to those skilled in the art. The use of a headband and an ear muff is disclosed by document D1 (D1, col. 9, lines 13-18), while a clip is briefly mentioned (D1, figure 4, ref sign 76 and figure 5, ref. sign 69). The inclusion of securing means in accordance with suggested claims 9-11 is regarded as an obvious design possibility for the skilled person in order to secure a sensing device to the ear, thus, not involving an inventive step in the sense of Article 33(3) PCT.

3.4 Audio communication means, as suggested by claim 12, to facilitate communication between the nursing station and the patient has already been employed, see document D2, col. 2, lines 31-46. It would therefore be obvious to the person skilled in the art, to apply this idea resulting in a corresponding effect to a sensing device according to document D1. A realisation of an audio communication means comprising a speaker and a microphone is given by document D3. Furthermore, the idea of having an aperture which allows motion of air in and out of the ear canal is also disclosed (D3, col. 3, line 57-col. 4, line 2), thus, not involving an inventive step in the sense of Article 33(3) PCT.

**INTERNATIONAL PRELIMINARY
EXAMINATION REPORT - SEPARATE SHEET**

International application No. PCT/GB03/00897

3.5 The use of sound absorbent material in order to absorb generated vibrational energy caused by speakers or microphones is well-known by those skilled in the field of acoustics. In accordance with circumstances, an absorbent material of suitable density, weight, size and shape is chosen. Suitable materials are for instance polyester fiber, felt, wood pulp, rock wool, mineral wool, cotton, glass fiber, sponge rubber, elastomers, silicone or a combination of these. The features of claims 13-15 are merely one of several straightforward possibilities from which the skilled person would select, in accordance with circumstances, without the exercise of inventive skill, in order to solve the problem posed, thus, not involving an inventive step in the sense of Article 33(3) PCT.
